

Handheld Computing for Hospital Pharmacists

Reduces Costs

Each pharmacist using HealthProLink™ generates \$15,000* per year in medication cost savings just by doing one incremental therapeutic intervention per day.

HealthProLink facilitates the therapeutic intervention process by providing fingertip access to constantly updated clinical tools and information, including hospital-specific therapeutic interchange guidelines, antibiograms and cost comparisons. HealthProLink makes it easy to document those interventions, with an easy-to-use format that takes only seconds to input the data. Contact us and we will help you calculate the savings you can generate with HealthProLink in your facility.

Increases Productivity

Pharmacists using HealthProLink are more productive, helping to offset pharmacy staffing shortages.

HealthProLink improves the productivity and effectiveness of your pharmacy staff by providing instant access to clinical tools and information and streamlining the documentation process for clinical interventions, medication error reporting and adverse drug reaction reporting.

Enhances Reporting

Pharmacy departments using HealthProLink generate the reports required to meet the increased challenges facing hospitals.

HealthProLink can facilitate documentation of the savings generated by therapeutic interventions. It also facilitates the documentation of medication errors in a non-judgmental manner to capture the type of data required to identify problems and improve the medication use process.

*Based on ASHP CliniTrend average of \$66 per therapeutic intervention.

Clinical Tools at Your Fingertips

HealthProLink™ puts your hospital's therapeutic interchange guide and antibiograms in an easy-to-use format at your staff's fingertips. This information can be constantly updated through a secure website and accessed by every member of your pharmacy staff with each sync of their handheld computers. HealthProLink also provides unique clinical tools that make your staff more effective, eliminate tedious calculations and improve accuracy.

Documentation on the Run

HealthProLink provides standardized reporting formats for documenting therapeutic interventions, medication errors and adverse drug reactions on the run. This eliminates documentation when pharmacists return to their desks and ensures more information is captured more often.

Simple Yet Powerful

HealthProLink's convenient handheld computer format is simple to learn and easy to use. It has easy to navigate screens, drop down menus, keypads for quick numerical input and minimal text entry. Reports take only seconds to complete.

Dynamic Management Tools

As soon as your pharmacy staff syncs their handheld computers, you can access the information at a secure HealthProLink server, and generate customized reports. HealthProLink reports enable you to quickly document the savings generated by your pharmacy staff through therapeutic interventions. These reports facilitate the monitoring and trending of performance and provide the data required to improve the medication use process.
